Samba Anonymous 설정 3
참조 3

Samba Anonymous 설정

전역 설정 부분에 `map to guest = Bad User`를 추가하고 익명 공유로 지정할 폴더 설정에 `public = yes` 구문을 추가한다.

```
[global]
    workgroup = MYGROUP
    server string = Samba Server Version %v
    security = USER
    map to guest = Bad User
    log file = /var/log/samba/log.%m
    max log size = 50
    idmap config * : backend = tdb
    cups options = raw
# User defined share
[public]
    path = /home/public
    read only = No
    guest ok = Yes
    browseable = Yes
    public = Yes
```
