The screenshot shows the Windows Network Manager interface. On the left, a tree view shows the 'Windows 연결 관리자' (Windows Network Manager) folder expanded to '정책 설정 편집' (Edit Policy Settings). The main pane displays the settings for the policy '인터넷 또는 Windows 도메인에 대한 동시 연결 수 최소화' (Limit the number of simultaneous connections to the Internet or Windows domain). The policy is currently set to '사용(E)' (Use). A dropdown menu is open, showing options: '0 = 동시 연결 허용' (Allow simultaneous connections), '1 = 동시 연결 최소화' (Limit simultaneous connections), '2 = 실패에 연결된 상태 유지' (Maintain connected state on failure), and '3 = 인터넷 사용 중에는 Wi-Fi 차단' (Block Wi-Fi during Internet use). The '사용(E)' option is selected. Below the settings, there are two informational boxes: one for setting 0 and one for setting 1. The bottom of the window shows the '확인' (OK), '취소' (Cancel), and '적용(A)' (Apply) buttons.
