reloadable

development mode

reloadable

: <https://tomcat.apache.org/tomcat-7.0-doc/config/context.html>

reloadable	<p>Set to <code>true</code> if you want Catalina to monitor classes in <code>/WEB-INF/classes/</code> and <code>/WEB-INF/lib</code> for changes, and automatically reload the web application if a change is detected. This feature is very useful during application development, but it requires significant runtime overhead and is not recommended for use on deployed production applications. That's why the default setting for this attribute is <code>false</code>. You can use the Manager web application, however, to trigger reloads of deployed applications on demand.</p>
