```

```
[user@host]#
```

## **/etc/apache2/conf-available/roundcube.conf**

가 .

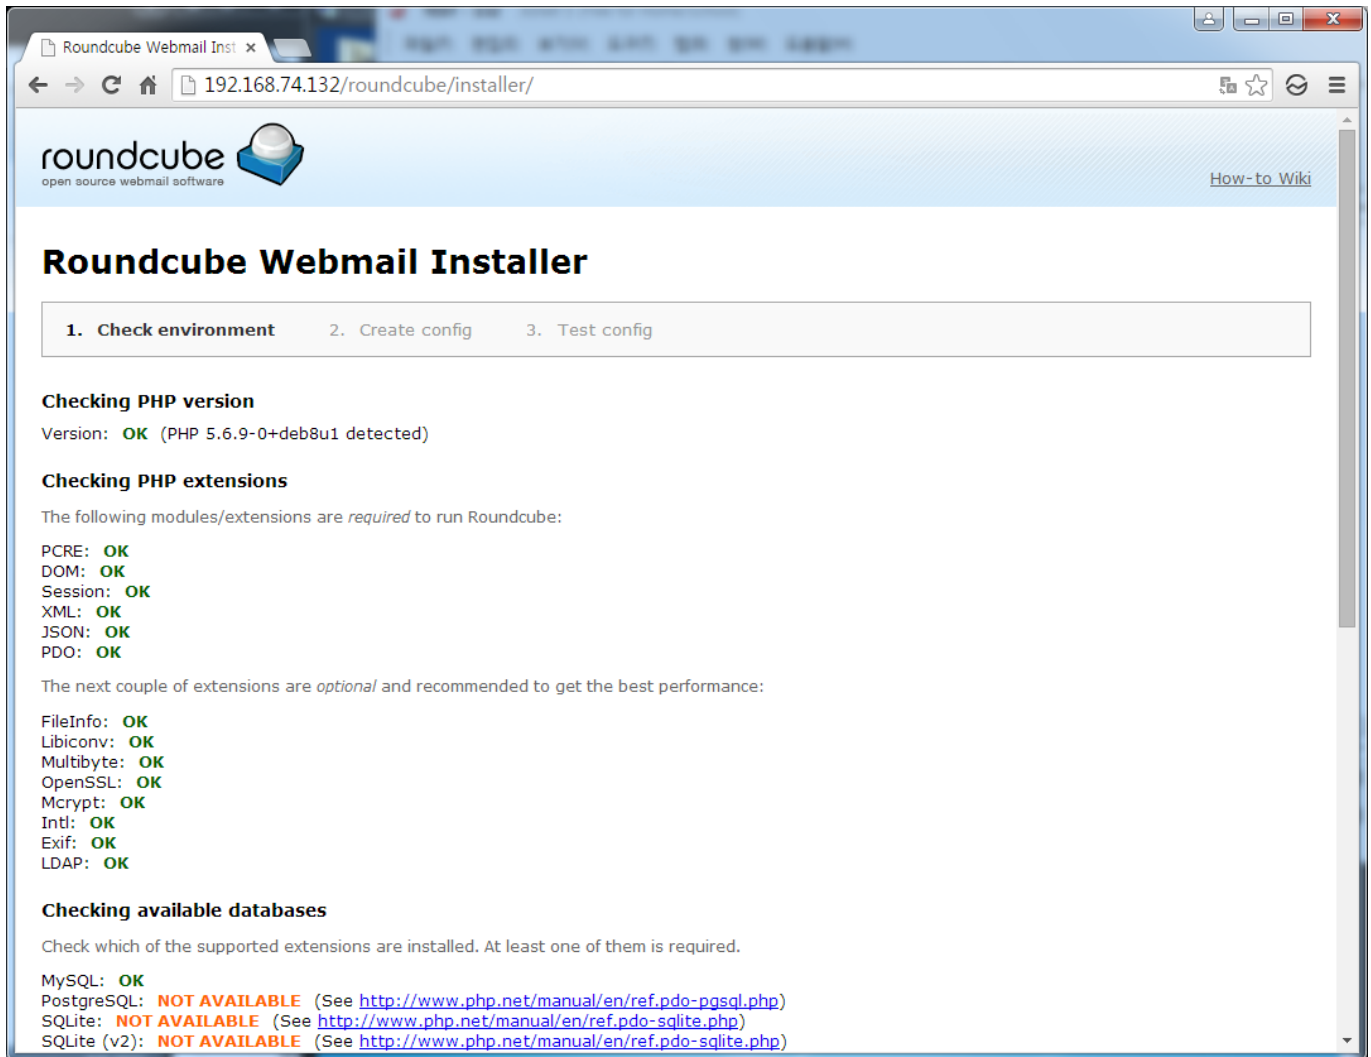

```
Alias /roundcube /var/www/roundcube

<Directory /var/www/roundcube>
    Options FollowSymLinks
</Directory>
```

```
[user@host]# a2enconf roundcube.conf
Enabling conf roundcube.
To activate the new configuration, you need to run:
    service apache2 reload
[user@host]# service apache2 reload
[user@host]#
```

## **Roundcube Installer**

roundcube .

date.timezone

The following settings are *optional* and recommended:

allow\_url\_fopen: **OK**  
 date.timezone: **NOT OK** (not set)  
 register\_globals: **OK**

**/etc/php5/apache2/php.ini**

```
root@mail:~# vim /etc/php5/apache2/php.ini
```

```
[Date]
; Defines the default timezone used by the date functions
; http://php.net/date.timezone
date.timezone = Asia/Seoul
```

```
[user@host]# service apache2 reload
```

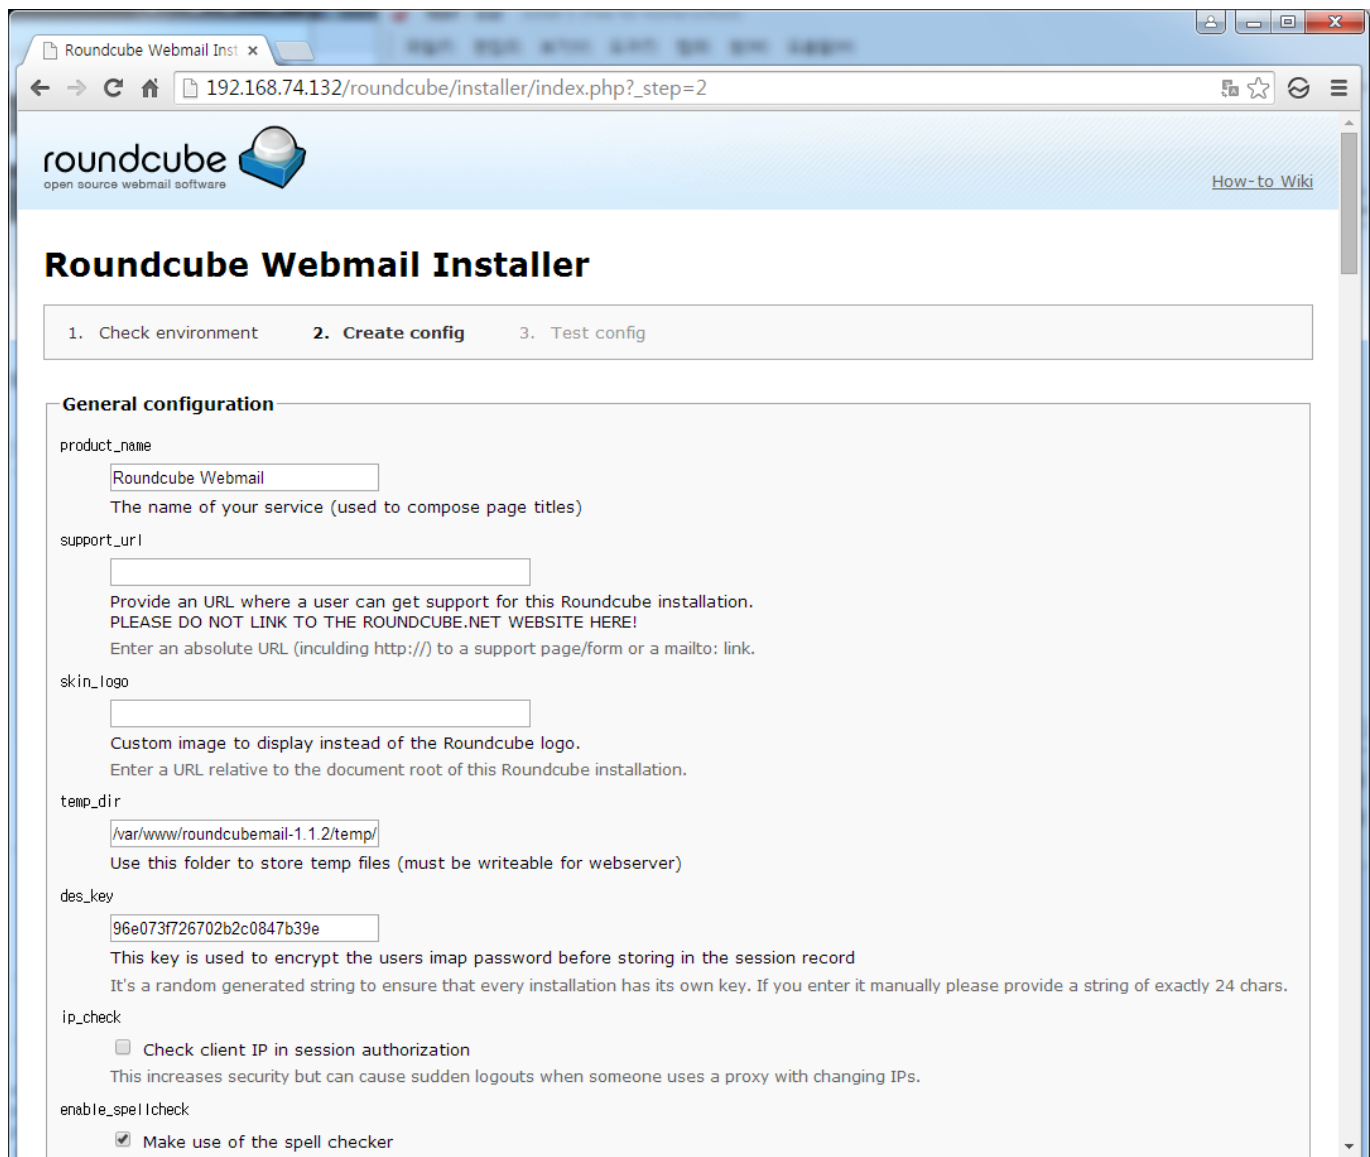

The following settings are *optional* and recommended:

allow\_url\_fopen: **OK**  
date.timezone: **OK**  
register\_globals: **OK**

OK

## Roundcube

The screenshot shows the Roundcube Webmail Installer web interface in a browser window. The browser's address bar shows the URL `192.168.74.132/roundcube/installer/index.php?_step=2`. The page has a blue header with the Roundcube logo and the text "open source webmail software". A "How-to Wiki" link is in the top right. The main heading is "Roundcube Webmail Installer". Below it is a progress bar with three steps: "1. Check environment", "2. Create config" (which is the current step), and "3. Test config". The "General configuration" section contains several form fields and checkboxes:

- product\_name**: A text box containing "Roundcube Webmail". Below it is the description: "The name of your service (used to compose page titles)".
- support\_url**: An empty text box. Below it is the description: "Provide an URL where a user can get support for this Roundcube installation. PLEASE DO NOT LINK TO THE ROUND\_CUBE.NET WEBSITE HERE! Enter an absolute URL (inculding http://) to a support page/form or a mailto: link."
- skin\_logo**: An empty text box. Below it is the description: "Custom image to display instead of the Roundcube logo. Enter a URL relative to the document root of this Roundcube installation."
- temp\_dir**: A text box containing `/var/www/roundcubemail-1.1.2/temp/`. Below it is the description: "Use this folder to store temp files (must be writeable for webserver)".
- des\_key**: A text box containing `96e073f726702b2c0847b39e`. Below it is the description: "This key is used to encrypt the users imap password before storing in the session record. It's a random generated string to ensure that every installation has its own key. If you enter it manually please provide a string of exactly 24 chars."
- ip\_check**: A checkbox labeled "Check client IP in session authorization". Below it is the description: "This increases security but can cause sudden logouts when someone uses a proxy with changing IPs."
- enable\_spellcheck**: A checked checkbox labeled "Make use of the spell checker".
